BRINGING. BABIES TO CHURCH AT SLAU-LANG.

What would you think of a hospital in England without nurses? I Wonder what would be thought of a very serious operation on the bowels (intestinal anastomosis) with only a blond old father to take care of the Patient? The remarkable thing is, not that we lose for want of nursing Some patients we ought to have saved, but that we are able to do major Surgery at all. We have in the past six years performed 100 abdominal Operations.

Still, we cannot rest while we feel that lives are being thrown away Which might be saved, and so we are extremely anxious to secure on our Return a fully qualified woman to take charge of the hospital nursing We expect to be able to meet her salary by money we can raise our-Selves on the field, and hope, with the permission of the Foreign Mis-Sions Committee, to be able to secure a suitably trained woman. For The past five years the hospital has been entirely self-supporting, and Has made no claims whatever on the home funds. We are hoping to Push this principle of self-support to the length of paying the salary of Our own nurse.

The hospital does, however, need some improvements, for which we Cannot hope to raise the money locally, and we would earnestly beg Friends who read this account to consider if they cannot give us some Gift towards the needs of a hospital which relieves so many sufferers.
