

Chloroform for *every day of the year*, and four minor operations without Chloroform. But I'm not sure that if you had to have a cataract extracted From your eye in a badly lighted room, you might not consider it *a very Serious* undertaking, although we list it as a minor operation. In this Theatre we have amputated 7 arms, 13 legs, and 5 feet; excised 10 Large joints; removed 37 stones; performed 100 abdominal operations; Removed about 100 cancerous tumours and as many non-malignant ones, As well as many other operations of all kinds. Is it fair that the doctor, who, working alone, has such a terrible strain thrown on him already, Should further have to work in an ill-lighted, badly fitted room? If not, Will you help us to build a new operating theatre? In addition to the Theatre, we need very badly more room and better apparatus for Laboratory work. The differential diagnosis of the fevers of the East Depends mainly on the microscope ; the diagnosis of the worms which Attack with such virulence the inhabitants of tropical lands can only be Efficiently made with the microscope. The true causes of some of our Diseases, many of them yet unrecognized, can only be discovered in the Pathological laboratory.

To lay on water at the hospital we shall need from £ 150 to £ 200. For the building of operating of operating theatre and pathological laboratory on The top of an at present existing block we shall need at least £ 250;

While for fittings for the new operating theatre at least £ 100 will be Required.

Thus, in all, at least £ 500 is needed. We have some hope that the Foreign Missions Committee may give us £ 250, but before we can even Ask this we must raise ourselves at least a like amount.

Can you help us?

Donations to help towards these objects should be sent to :

Dr. JAMES L. MAXWELL, Jun.,

31, Hammelton Road,

Bromley, Kent.
